

Lab 2 Report

Name

Student ID

Date April 22, 2020

1 Test Plan

1.1 Test requirements

The Lab 2 requires to (1) select 15 methods from 6 classes of the SUT (GeoProject), (2) design Unit test cases by using **input space partitioning (ISP)** technique for the selected methods, (3) develop test scripts to implement the test cases, (4) execute the test scripts on the selected methods, (5) report the test results, and (6) specify your experiences of designing test cases systematically using the ISP technique.

In particular, based on the statement coverage criterion, the **test requirements** for Lab 2 are to design test cases *with **ISP*** for each selected method so that “*each statement of the method will be covered by at least one test case and the minimum statement coverage is 70% (greater than Lab 1)*”.

1.2 Test Strategy

To satisfy the test requirements listed in Section 1, a proposed strategy is to

- (1) select **those 10 methods that were chosen in Lab1** and **5 new methods** that are NOT selected previously. If possible, some of the methods do NOT have primitive types of input or output parameters (if possible).
- (2) set the objective of the minimum statement coverage to be greater than that of Lab 1 and adjust the test objective based on the time available (if necessary).
- (3) design the test cases for those selected methods by using the **input space partitioning (ISP)** technique.

1.3 Test activities

To implement the proposed strategy, the following activities are planned to perform.

No.	Activity Name	Plan hours	Schedule Date
1	Study GeoProject	2	14 th , April
2	Learn ISP and JUnit	2	15 th , April
3	Design test cases for the selected methods	3	17 th , April
4	Implement <u>Base32</u> test	1	19 th , April

	cases		
5	Perform <u>Base32</u> test	1	19 th , April
10	Implement <u>Geomem</u> test cases	3	21 th , April
11	Perform <u>Geomem</u> test	3	21 th , April
12	Implement <u>GeoHash</u> test cases	1	22 th , April
13	Perform <u>GeoHash</u> test	2	22 th , April
14	Implement <u>Info</u> test cases	0.5	22 th , April
15	Perform <u>Info</u> test	0.5	22 th , April
16	Complete Lab2 report	2	22 th , April

1.4 Design Approach

The **ISP** technique will be used to design the test cases. Specifically, the possible partitions and boundary values of input parameters shall be identified first using the **Mine Map** and **domain knowledge** (if applicable). The possible **valid combinations** of the partitions (i.e., **all combination coverage**) as well as the boundary values shall be computed for the input parameters of each selected method. Each of the partition combination can be a possible test case. *Add more test cases by considering the possible values and boundary of the outputs for the methods or by using test experiences.*

1.5 Success criteria

All test cases designed for the selected methods must pass (or 90% of all test cases must pass) and the statement coverage should have achieved at least 70%.

2 Test Design

To fulfill the test requirements listed in section 1.1, the following methods are selected and corresponding test cases are designed.

No.	Class	Method	Test Objective	Inputs	Expected Outputs
1	Base32	A. <code>encodeBase32(long i, int length)</code> B. <code>encodeBase32(long i)</code>	Returns the base 32 encoding of the given length from a geohash	A. <code>Base32.encodeBase32(75324, 4) //positive</code> <code>Base32.encodeBase32(-122,4) //negative</code> B. <code>Base32.encodeBase32((long) 32.0);</code>	A. 29jw -003u B. 000000000 010

		C. decodeBase32(String hash)	Returns the conversion of a base32 geohash to a long	C. Base32.decodeBase32("w") //positive Base32.decodeBase32("-j") //negative	C. 28 -17
		D. getCharIndex(char ch)	Throws an IllegalArgumentException if the character is not found in the array.	D. Base32.getCharIndex('-')	D. Throw message: "not a base32 character : -"
2	GeoHash	A. adjacentHash(String hash, Direction direction, int steps) Method: adjacentHash() B. adjacentHash(String hash, Direction direction) Method: testAdjacentHash()	Returns the adjacent hash N steps in the given Direction. A negative N will use the opposite Direction ----- Returns the adjacent hash in given Direction	hash = "11w"; direction = Direction.TOP; A. adjacentHash = geoHash.adjacentHash(hash, direction, -1); //steps<0 adjacentHash = geoHash.adjacentHash(hash, direction, 5); //steps>0 B. adjacentHash = geoHash.adjacentHash(hash, direction); //normal ----- ➤ adjacentHash = geoHash.adjacentHash("zzz", Direction.TOP); //out of border(top) ➤ adjacentHash = geoHash.adjacentHash("145", Direction.BOTTOM); //out of border(bottom) ➤ adjacentHash = geoHash.adjacentHash("145", Direction.BOTTOM); //out of border(bottom)	A. geoHash.adjacentHash("11w", Direction.BOTTOM, 1) "14y" B. normal: "11y" ----- out of border: ➤ top: "gzz" ➤ bottom: "11g" ➤ left: "pbp" ➤ right: "pr0"

				<pre> 000",Direction.LEFT); //out of border(left) ➤ adjacentHash = geoHash.adjacentHash(" ppp",Direction.RIGHT); //out of border(right) </pre>	
		<pre> C. encodeHash(double latitude, double longitude, int length) </pre>	<pre> return hash of adjacent hash </pre>	<pre> C. T1:{latitude=- 50,longitude=0,length=5 ,expect:hp058} T2:{latitude=- 50,longitude=- 100,length=0,expect:thr ow:"length must be greater than zero"} T3:{latitude=- 100,longitude=500,lengt h=5,expect:throw:"latit ude must be between -90 and 90 inclusive"} T4:{latitude=- 100,latitude=45,length= 0,expect:throw:"length </pre>	<pre> C. hp058 throw:"le ngth must be greater than zero" throw:"la titude must be between - 90 and 90 inclusive " </pre>

				<p>must be greater than zero"} T5:{latitude=120,latitude=45,length=3,expect:throw:"latitude must be between -90 and 90 inclusive"} T6:{latitude=120,latitude=45,length=-5,expect:throw:"length must be greater than zero"}</p>	
3	Info	A. id()	id of Info	<pre>String a = "a"; Optional<String> id = Optional.of(a); Info info = new Info(25.5, 30.0, 10000, 555, id);</pre> <p>A. info.id()</p>	A. Optional.of("a")
		B. lat()	Latitude of Info	<pre>String a = "a"; Optional<String> id = Optional.of(a); Info info = new Info(25.5, 30.0, 10000, 555, id);</pre> <p>B. info.lat()</p>	B. 25.5
		C. lon()	Longitude of Info	<pre>String a = "a"; Optional<String> id = Optional.of(a); Info info = new Info(25.5, 30.0, 10000, 555, id);</pre> <p>C. info.lon()</p>	C. 30.0
		D. time()	Time of Info	<pre>String a = "a"; Optional<String> id = Optional.of(a); Info info = new Info(25.5, 30.0, 10000, 555, id);</pre> <p>D. info.time()</p>	D. 10000
		E. value()	Value of Info	<pre>String a = "a"; Optional<String> id = Optional.of(a); Info info = new Info(25.5, 30.0, 10000, 555, id);</pre> <p>E. info.value()</p>	E. 555

		F. toString() ()	Show all information of Info	<pre>String a = "a"; Optional<String> id = Optional.of(a); Info info = new Info(25.5, 30.0, 10000, 555, id); F. info.toString()</pre>	F. "Info [lat=25.5, lon=30.0, time=10000, value=555, id=Optional .of(a)]"
4	Geomem	G. find(double topLeftLat, double topLeftLon, double bottomRightLat, double bottomRightLon, long start, long finish)	return info records	<pre>T1:{topLeftLat=-1, topLeftLon=100, bottomRightLat=-90, bottomRightLon=170, PRECISION=0.00001, expect:(size=1, lat=-90, lon=150, time=500L, value="X", id="1") }</pre> G. find(double topLeftLat, double topLeftLon, double bottomRightLat, double bottomRightLon, long start, long finish)	G. T
		H. createRegionFilter(final double topLeftLat, final double topLeftLon, final double bottomRightLat,	predicate	<pre>H. T1:{topLeftLat=-2, topLeftLon=101, assert:True} I. T2:{topLeftLat=0, topLeftLon=101, assert:False} J. T3:{topLeftLat=-2, topLeftLon=99, assert:False} K. T4:{topLeftLat=-1, bottomRightLon=171, assert:False} L. T5:{bottomRightLat=-91, bottomRightLon=169, assert:False }</pre>	H. T, F

		final double bottomRi ghtLon)

3 Test Implementation

The design of test cases specified in Section 2 was implemented using JUnit 4. The test scripts of 3 selected test cases are given below. The rest of the test script implementations can be found in the [link](#) (or JUnit files).

5 Summary

In Lab 2, **15 test cases** have been designed and implemented using JUnit and the ISP technique. The test is conducted in **3 CI** and the execution results of the 15 test methods are **all passed**. The total statement coverage of the test is **88%**. Thus, the test requirements described in Section 1 are satisfied. **Some lessons learned in this Lab are ...**
